1  $TITLE (VACIS2)
   $REGISTERBANK(0,1)
   ;-----
   ; FIRMWARE OPERATING SYSTEM
   ;
5  ;
   ; for the
   ; VEHICLE AUTOMATED CONTRABAND INSPECTION
   ; SYSTEM (VACIS)
   ; 12-AUG-96
10 ;
   ; by Eric Ackermann/Ken Valentine/Jeff Adams
   ; Instrument Products Organization
   ; Copyright 1996,97,98,99 by SAIC
   ;-----
15 ;
   ;-----
   ; This work is dedicated to the memory of Ken
   ;-----
   ;
20 ; The target CPU is a DALLAS 87C520 wP running
   ; at 24 Mhz.
   ;
   ; ----- REVISIONS -----
   ; V00.0 - As released for 24 Mhz crystal and
25 ; RS-485 half-duplex serial communications.
   ; Serial comm handled by Siemens SAB 82526
   ; High Level Serial Communications Controller.
   ; SCC is operated as a slave in Normal Response
   ; Mode with Baud Rate set by the Master's
30 ; (System Controller's) clock.
   ; ** 12-AUG-96 **
   ;
   ; V01.2 Cleaned up the buffer handling of counter data
   ; in order to fix bug of not ignoring the unused
35 ; counters. Added the WRITE_DAC command handler.
   ; Uncommented the DAC init. Added READDAC command.
   ; Added Counter Reset command.
   ; ** 20-JAN-98 **
   ; ** Jeff Adams **
40 ; V01.3 Added Stretch Memory to DAC communication. This
   ; is needed as running at full speed violates min
   ; WR pulse width of AD7228 DACs.
   ; ** 21-JAN-98 **
   ; ** Jeff Adams **
45 ; V02.0 Removed unused code, added comments, fixed minor bugs
   ; and renamed file to VACIS2.ASM from VACISBDD.ASM in
   ; preparation for first system demo.
   ; ** 26-JAN-98 **
   ; ** ESA **
50 ; V02.1 Put SJMP NXT_IC line back in for proper counter
   ; reading. Done by JA 1-29-98, documenting now.
   ; ** 11-FEB-98 **
   ; ** ESA **
55 ; V02.2 Set default DAC (discriminator) setting to optimum value
   ; of 225.
   ; ** 11-FEB-98 **
   ; ** ESA **
   ;
   ; unreleased Add packet mode for PC to slave comm.
60 ; ** 12-JAN-99**
   ; ** ESA **

SLIST
245 DSEG ;On-board RAM byte definitions
    R0_RB1 EQU 08H ;R0, Reg Bank 1. Needs label for PUSH/POP Instructions
    IC_CNTR EQU 0AH ;Cntr for loops doing I/O w/cntr ICs (R2 Bank 1).
    SND_PKT_SIZ EQU 0BH ;Num of PKTs to be Xmitted. Dec'd in T1 during PKT Xmit and
250 ;...set to NEW_PKT_SIZ when Xmit done
    CNTR_RDS EQU 0DH ;Init'd to NEW_PKT_SIZ and dec'd to indicate PKT done
    ;... (R5, Bank 1).
    LTCH_CNTR_TMR_LB EQU 0EH ;Software timer inc'd in T0 int to cause latching
    ;...of counters. Low byte (R6, Bank 1).
255 LTCH_CNTR_TMR_HB EQU 0FH ;High byte (R7, Bank 1).
    BD_ADR EQU 1FH ;Printed Circuit Board Adr
    ;...as read from DIP switch
    PROG_F EQU 21H ;Program status/control flags
    STATUS EQU 2FH ;Serial status-byte bits
260 CNTR_BUF EQU 30H ;Start of buffer for 32 bytes of counter data
    ODD_BEGIN EQU 40H ;Beginning of Odd counter bank in buffer.
    OVRFLW0_7 EQU 50H ;Overflow byte for counters 0-7
    OVRFLW8_F EQU 51H ;Overflow byte for counters 8-15. OVRFLW bytes not
    ;...currently used. When implemented will indicate
    ;...which counter has overflowed. See CTROVF bit.
265 TEMP_LSB EQU 52H ;Temp low byte
    TEMP_MSB EQU 53H ;Temp hi byte (1 bit in TEMP_MSB.0)
    GC_RCV_LSB EQU 54H ;Get Counts Received counter low byte (Real&Fake)
    GC_RCV_MSB EQU 56H ;Get Counts Received counter high byte (Real&Fake). Used for
270 ;...diagnostics only. Xmitted with SND_DEBUG cmdnd.
    RL_RCV_LSB EQU 57H ;Reloads Received counter low byte
    RL_RCV_MSB EQU 58H ;Reloads Received counter high byte. Used for
    ;...diagnostics only. Xmitted with SND_DEBUG cmdnd.
275 NUMERR_LSB EQU 59H ;Number of Errors counter low byte
    NUMERR_MSB EQU 5AH ;Number of Errors counter high byte. Used for
    ;...diagnostics only. Xmitted with SND_DEBUG cmdnd.
    CUR_CNTR_LTCH_TM_LB EQU 060H ;Reload value for LTCH_CNTR_TMR during PKT. Reset
    CUR_CNTR_LTCH_TM_HB EQU 061H ;...to NEW_LTCH_CNTR_TM at start of new PKT (in T0).
280 PKT_BUF_IN_LB EQU 062H ;Ptr for loading a new set of cntr data from cntr latches
    PKT_BUF_IN_HB EQU 063H ;...to on-board RAM buffer for compiling current PKT.
    PKT_BUF_OUT_LB EQU 064H ;Ptr for loading a complete PKT buffer into Siemens
    PKT_BUF_OUT_HB EQU 065H ;...XFIFO for transmission.
    DUMY0_LSB EQU 80H ;LB of 1st test data word (Fake Data)
    DUMY0F0_7 EQU 0A0H ;Overflow byte for dummy data
285 ;...words 0-7.
    DUMY0F8_F EQU 0A1H ;Overflow byte for dummy data
    ;...words 8-0fh.
    REC_CNT_LO EQU 0B4H ;Low byte of rec'd byte count
    ;...as read from SCC RBCL reg
290 HDLC_CNTL EQU 0B6H ;HDLC Control byte - first byte
    ;...in RFIFO for all messages
    COMMAND EQU 0B7H ;2nd byte of every message -
    ;...command from system cntrlr
    DACV EQU 0B8H ;Rec buffer location for DAC settings sent with the
295 ;...SET_DACs command.
    NEW_PKT_SIZ EQU 0B8H ;For PKT cmdnds rec buffer location for the packet size of the
    ;...next packet.
    NEW_LTCH_CNTR_TM_LB EQU 0B9H ;Rec buffer location for time between cntr latches as
    NEW_LTCH_CNTR_TM_HB EQU 0BAH ;...sent by PKT_SYNC, PKT_ASYNC or TST_PKT_S commands.
300 ;...Format is 65535- (1/10 of T0 intervals). Adjusted by
    ;...Master to account for varying speeds of target.
    DAC_SAV EQU 0CCH ;Used to save DAC values for readback
    STACK EQU 0E0H ;Bottom of stack
305 BSEG ;On-board RAM bit definitions
    RESET_526 BIT P1.0 ;82526 RESET, active high
    GATE BIT P1.1 ;82C54 GATE
    DIO BIT P1.2 ;Data I/O for DS1620
    SCK BIT P1.3 ;Clock for DS1220 temp sense
310 SEL BIT P1.4 ;Select for DS1620
    SPRP15 BIT P1.5 ;SPARE
    SPRP16 BIT P1.6 ;Spare
    SPRP17 BIT P1.7 ;Spare
    INT_526 BIT P3.2 ;82526 Interrupt
315 INT_RQ BIT P3.3 ;External Interrupt
    ;...Request (-INT1)
    ;... (not used)
    STS_XDU BIT STATUS.0 ;Transmit Data Underrun (XDU)
    ;...CPU not feeding XFIFO fast enough
320 CTROVF BIT STATUS.1 ;Count overflow in one
    ;...or more counters
    STS_INVALID BIT STATUS.2 ;A valid frame received but the
    ;...message was not valid
    STS_RDO_RFO BIT STATUS.3 ;Rec Data Overflow (RDO) in RSTA

```

```

325                                     ;...or Rec Frame Overflow (RFO)
                                     ;...in EXIR
STS_OTHER    BIT STATUS.4 ;General status bit to indicate
                                     ;...an unexpected error type
                                     ;...reported by SCC
330 STS_PCE    BIT STATUS.5 ;Protocol Error reported
                                     ;...on last reception
STS_RAB      BIT STATUS.6 ;Received Aborted message
                                     ;...status from SCC
RES_PKT      BIT STATUS.7 ;Indicates last PKT never sent or aborted - there is
335                                     ;...a slight chance this bit is set in error if POLL from
                                     ;...Master comes after JNB PKT_QUED and before or during
                                     ;...MOV A,#XRES in QUE_PKT sub.
;STS_CRC     BIT STATUS.7 ;Checksum error in last
                                     ;...received message
340 CNTRS_LTCHD BIT PROG_F.0 ;Indicates cntrs latched and ready to be read to buffer.
                                     ;...Set in T0 int and clr'd after cntrs read.
PKT_QUED     BIT PROG_F.1 ;Set after first 32 bytes of a pkt have been loaded into XFIFO.
                                     ;...When set EX0 will set TF1 on next XPR to force T1 int
                                     ;...which finishes pkt transmission once initiated.
345 SYNC_CMND  BIT PROG_F.2 ;Set in Seimens int when PKT_SYNC or TST_PKT_SYNC cmnd rec'd.
                                     ;...Polled during cntr read to buffer to abort and execute cmnd.
DATA_TYPE    BIT PROG_F.3 ;Clr if data type is real counts in PKT mode, set if test counts.
                                     ;...Set in PKT_SYNC or TST_PKT_SYNC cmnd.
PKT_BUF      BIT PROG_F.4 ;Indicates current buffer for new cntr data in PKT mode. If clr
350                                     ;...loading CNTR_BUF0, if set loading CNTR_BUF1.
PKT_IN_PROG  BIT PROG_F.5 ;Set in PKT_SYNC or TST_PKT_SYNC cmnd to indicate PKT mode. All
                                     ;...non-PKT cmnds will call STOP_PKT to clr and end PKT mode.

NEW_CMND     BIT PROG_F.6 ;Set when a valid command
                                     ;...rec'd, cleared when cmnd
355 XFIFO_RDY  BIT PROG_F.7 ;Set on Trans Pool Ready (XPR)
                                     ;...int, cleared when XFIFO
                                     ;...is written to.

360 XSEG                                     ;External Hardware Definitions.
                                     ;...READ/WRITE addresses
PKT_BUF0     EQU 0000H ;Starting address of buffer 0 in on-board 1K RAM.
PKT_BUF1     EQU 0200H ;Starting address of buffer 1 in on-board 1K RAM.
                                     ;...Each buffer is 1/2K (512 bytes) so can handle max PKT size of 16.
365 DIP_SW    EQU 04FFH ;DIP Switch Address. LB must be
                                     ;...FF to avoid bus contention on
                                     ;...external memory read cycle (this may not
                                     ;...be needed w/stretch memory). HB must be
                                     ;...04 so as not to access internal 1K SRAM.
